SUMMARY

I want to be a good programmer and develop high quality applications to make life easier for everyone. Even though having late starting point, I am enthusiastic and willing to self-learn to improve my programing skill.

WORK EXPERIENCE

foodpanda   Sep 2013 – Jan 2015
Operations Executive

- Managed a team of 4 to upload and optimized data in both front-end and back-end to improve user experience of foodpanda.vn
- Utilized Asana to manage workflow with other departments.
- Provided frequent reports based on daily and weekly CRM reports, Google Analysis to support sales, marketing and customer service team.
- Planned and deployed order machines to every vendor for the launching partnership with KFC, Burger King & Jollibee.
- Significantly raised number of orders by 75% in one month period.

EDUCATION

Institute of Systems Science, Singapore   Aug 2017 – Now

Graduate Diploma in Systems Analysis

Foreign Trade University, Ho Chi Minh City/ Vietnam   Aug 2010 – Sep 2014

Bachelor of Business Administration

SKILLS

Programing language: Java (proficient), C#, SQL, JavaScript.
Mobile development: Android (proficient), React Native (prior experience).
Backend development: ASP.NET, Spring.
Version control system: Git, GitHub (proficient), BitBucket.

SCHOOL PROJECTS

The following are two most notable projects. Other school projects can be found in my GitHub university account.

Stockist (goo.gl/12Uz1i)   4-day project

A group project of developing an auto-part inventory system using Java & Spring framework.

My part is developing the application architecture, implementing security and additional function like sending email.

The project was finished the soonest among other groups and richest in features, while remained limited to no bug.

Although the project went smoothly, I learnt that I should have not taken too much work, because a good leader should be able to divide tasks among team members.

Seven Books Application (goo.gl/nimYCu)   2-day project

Group project using C# & ASP .NET framework to develop a bookstore order page as well as management page.

My part is setting up environments, application architecture, helping other team members.

The project was finished on time with enough features and some bugs.

The experience I learnt from this project is that short-term project requires even more careful planning than mid to long term project.

PAST PROJECTS

Before joining my current course in ISS, I was having the opportunity to take part in some real-life project as an Android developer.

Though the scale of each project is minor, it helps me learn about real life practice and how to develop good team work.

LamPhong Store (goo.gl/jz5U1K)

DonePaper (goo.gl/dEvcgA)

Mecho Cannabis Sharing (goo.gl/nofRpB)
